

Product Introduction

- Features a powerful 4500W motor with three-speed control and adjustable suction power.
- The dust collection tank is made of thickened stainless steel for durability and long-lasting performance.
- Includes a push-type suction nozzle for convenient cleaning while moving. Complete with all necessary accessories.
- Large 80L capacity dust collection tank for efficient debris collection.
- Suitable for both dust and liquid collection.

Specifications

Name	unit	parameter
Voltage	V	220
Rated Power	HZ	50
Power	W	4500
Suction Power	Kpa	21
Suction Inlet Diameter	mm	40
Capacity	L	80
Weight	kg	42
Dimensions	mm	700*560*1100

*The size is measured manually, please refer to the actual product for any slight errors

Bag filter element

It effectively removes tiny particles from the gas. Replacing the filter bag is also easier and faster, resulting in lower operating costs.

Three-position switch control

Made of industrial-grade plastic, with static-protection features; the button design is simple and easy to use.

Swivel wheels

It can rotate 360 degrees, allowing easy movement of the equipment and effortless maneuvering around obstacles during operation, saving time and effort. The wheels are wear-resistant, corrosion-resistant, and impact-resistant, with low noise levels and a color that will never fade.

Float-type water shut-off valve

The float valve works by using the buoyancy of the float to close the valve when the water level reaches a certain point, thus preventing water from flowing back into the vacuum cleaner and protecting the motor and other electronic components from water damage.

Accessories

5m hose*1

Front suction bar*1

Flat nozzle*1

Round brush*1

Flexible hose connector *1

Handheld vacuum cleaner*1

Aluminum alloy extension tube*1
